

Force Five Inc.
Agency/ Distributor for Sensing Tech
Danville, CA 94526
USA

To whom it may concern:

Force5 intends to work with customers, provides services off of, and sell and market product in the United States that will use 60 GHz pulse radar. We sincerely need the FCC to adopt rules that will allow for these radar operations and tech to exist in a wide range of consumer and professional OEM products. We have major OEM customers such as Amazon, Lab 126, Intel, _____ [Indicate specific products, if possible, and benefits to U.S. consumers, if possible.]

Force5 recognizes and supports the proposals for new rules that were made by Acconeer in its comments filed in the proceeding (ET Docket No. 21-264).

We encourage the FCC to promote advances in new radar technologies by adopting rules that are flexible, consistent with the ETSI standards, and technologically neutral. This enables manufacturers to innovate with radar technologies in a time and cost-effective manner and provide clear understanding how to develop products (leveraging this key innovation), and therefore deliver them to market as a result.

With Force Five's planned use of pulse radar technology, it is especially important that the Commission ensure that all types of radar systems are treated equally when considering the impact of proposed technical rules on their specific operations. The Commission should maintain fair access to market for all parties, and not limit competition from entering the market by adopting rules that have varying consequences on different radar technologies.

Thank you for your help and consideration of this letter and advisement. Much appreciated.

Regards,
